painting essentials

‘start with the finish’

Richard Abela

CEO, Oldfields Holdings

We are fortunate to have such high-quality paints available in Australia and New Zealand. So much so, that what ultimately determines the finish of any job is the quality of application tools and proper preparation.

You may have noticed in recent times that the team at Oldfields has accelerated the release of new products.

Our team is dedicated to the continual roll out of innovation that is designed to make the professional painter's life more efficient while also delivering exceptional paint finish.

We are very pleased that this tradition continues so that when a painter sees the Oldfields Pro Series brand they can rest assured that our R&D team have done the hard work for them.

Over the last couple of years, we have introduced more top shelf products including the Pro Series brush range, delivered value and efficiency in our Tradesman 6 pack roller covers, lifted the quality of professional scrapers and recently delivered a new drop cloth range.

We are proud to announce that our famous yellow roller has a new stable-mate in the Micro-Max Microfibre. This microfibre has been researched and tested over and over so that Oldfields can again raise the bar on quality and in doing so, set a new benchmark in microfibre finish.

I want to thank you for your support of Oldfields and in return we commit to continuing to provide best in class paint tool essentials for the professional painter.

Richard Abela

CEO, Oldfields Holdings

A Proud History A Bright Future

In the Spring of 1912, Henry Oldfield of Norwich, England moved his family to Australia.

Trained as a Master Brush Maker, Henry saw an opportunity for quality paint brushes to be made and sold in his new home country.

In 1916, he opened a fledgling brush making business in a small factory on Charlotte Street, Campsie (South West Sydney). Here, Henry Oldfield's vision was to create quality painting tools for the professional painter.

Despite the many decades and many fads in between, Henry's vision remains the cornerstone of our modern operations.

It would be easy to view the early advancements made by Henry Oldfield with a sense of nostalgia, brushes of beautiful finish, distinguishingly hand-crafted and made to last.

This is all true, but at the core of what Henry Oldfield was delivering was innovation. Brushes and tools that were better than those which came before it.

Creating brushes and tools that are better than those which came before it - is in Oldfield's DNA.

We don't do this for our own benefit, just like Henry Oldfield, we place the needs of the professional painter first and foremost.

Best paint equipment, best tools, best result.

Manufacture of the Pro Series Brush

Founder: Henry Oldfield

A Note About Packaging And Shipping

Oldfields ensures the right product offer in the best packaging with the right amount of product information and usage tips to make painting faster and easier.

To best display our products, this guide features a number of products featured out of their packaging.

Rest assured, each and every product has appropriate and attractive packaging to make merchandising a breeze.

All orders over \$200 ex GST are free of shipping charges.

Orders placed before 2pm AEST will be shipped the same day.

Oldfields Light-Duty Foldable Zippy-Scaff™ Range

Oldfields proudly designs and manufactures a range of quality mobile working platforms designed for commercial and DIY use.

Movement is easy, when folded up the scaffold can be wheeled through a standard doorway.

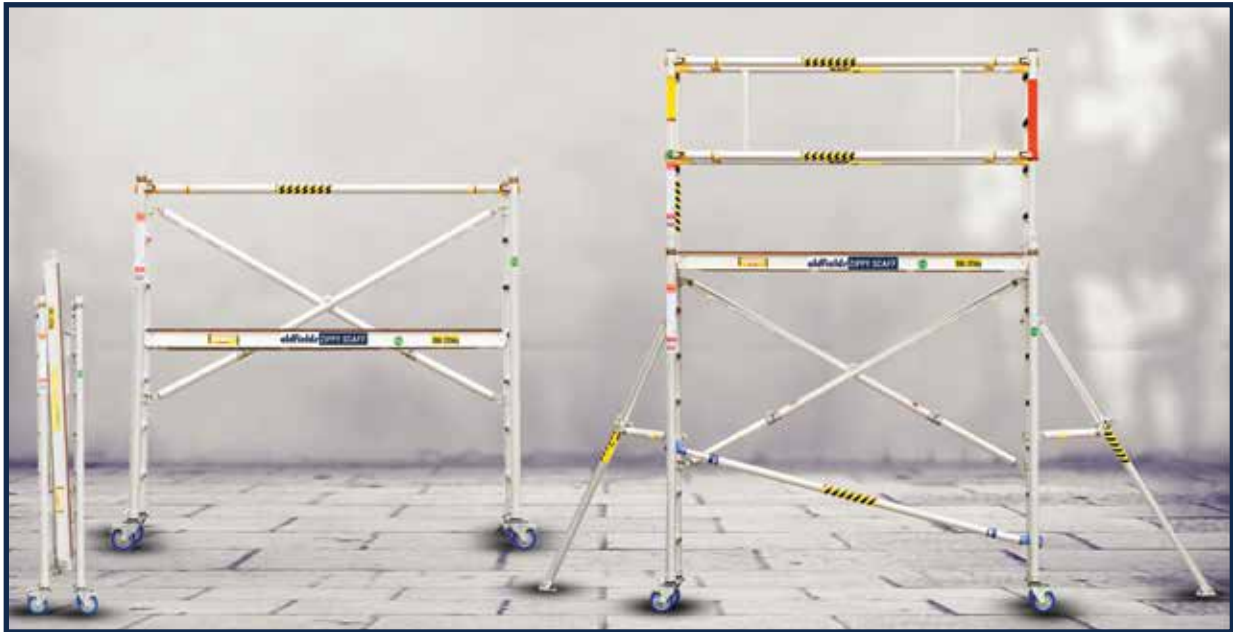

Ready for use in seconds, it can also act as a trolley for moving equipment around the home, office, factory or work site.

Alternate working heights can easily be achieved in seconds by adjusting the working platform.

Zippy-Scaff™ foldable aluminium scaffold is an extremely versatile folding scaffold.

Zippy-Scaff™ The Original And The Best

- Australian designed
- Easy to assemble
- Lightweight
- Compact and portable
- Working load rated to 225kg
- Foldable - easy to erect and dismantle in seconds
- Built-in ladder access
- Adjustable deck heights from 0.4m – 1.9m*
- Deck assembly manufactured with slip-resistant plywood

Description	Size	SKU	Ctn QTY	Barcode
Aluminium Zippy-Scaff™ Base Unit	1.96m Long x 0.74m Wide x 1.96m High	AL-FSHA2	1	 9 310590 615142
Guard Rail Pack with Outriggers	1.9m	AL-FSXP2	1	 9 310590 615173
Extension Pack with Outriggers	2.9m	AL-FSXP29	1	 9 313290 103070
Extension Pack	3.9m	AL-FSXP39	1	 9 313290 103087

Safety / Technical Requirements:

- Standing Heights: 0.4m/0.9m/1.2m/1.9m/2.9m/3.9m*
- Working Load (Max): 225kg

* Extension pack with outriggers required as per AS/NZS 1576

NB: All braces are to be mounted from the inside of the frame.
Each extension pack is required for subsequent heights. E.G to reach standing height of 3.9m, AL-FSHA2, AL-FSXP2, AL-FSXP29 and AL-FSXP39 are all required.

Disclaimer: AS/NZ1576 states that all single width towers are to be fitted with outriggers when platform is at 1.9m and above. Plant design registered with WorkCover NSW.

Fibreglass Zippy-Scaff™ When Electrical Safety Matters

Ideal for sub-stations, computer rooms, construction sites and mines. Built with different trades in mind, Zippy-Scaff also provides a versatile access solution to trades such as decorators, electricians, insulation contractors, plasterers and sign writers.

- Resistant to corrosion
- Lightweight & easy to handle
- Foldable, easy to erect and dismantle in seconds
- Bright, visible safety orange
- Ribbed transom tube
- Easy to assemble with built in ladder

Description	Size	SKU	Ctn QTY	Barcode
Fibreglass Zippy-Scaff™ Base Unit	1.96m Long x 0.74m Wide x 1.96m High	F-FSHAO2	1	 9 313290 102905
Fibreglass Zippy-Scaff™ Guard Rail Pack	1.9m	F-FSXP2	1	 9 313290 102912

Safety / Technical Requirements:

- Standing Heights: 0.4m/0.9m/1.2m/1.9*m
- Working Load (Max): 225kg

* Extension pack with outriggers required as per AS/NZS 1576

NB: All braces are to be mounted from the inside of the frame.

Disclaimer: AS/NZ1576 states that all single width towers are to be fitted with outriggers when platform is at 1.9m and above. Plant design registered with WorkCover NSW.

- NATA Tested AS1931.1 and AS1931.2
- 5kV DC Insulation Resistance
- 110kV AC High Voltage Withstand
- 220kV AC High Voltage Withstand
- 80kV DC High Voltage Withstand
- Light Duty Rated SWL – 225kgs
- AS/NZS 1576.3-1995 Compliant

Mini Zippy-Scaff™ Small Yet Mighty

The Mini Zippy-Scaff foldable aluminium scaffold is an extremely versatile folding scaffold designed with providing access to smaller areas.

- Australian designed
- Easy to assemble
- Lightweight
- Compact & portable
- Working load rated to 225kg
- Foldable - easy to erect and dismantle in seconds
- Built-in ladder access
- Adjustable deck heights from 0.4m – 1.5m*
- Deck assembly manufactured with slip-resistant plywood

Description	Size	SKU	Ctn QTY	Barcode
Mini Zippy-Scaff™ Base Unit	1.6m Long x 0.74m Wide x 1.6m High	AL-FSHA-M	1	 9 313290 101953
Mini Zippy-Scaff™ Guard Rail Pack	1.5m	AL-FSXP-M	1	 9 313290 101960

Safety / Technical Requirements:

- Standing Heights: 0.4m/0.7m/1.2m/1.1m/1.5m*
- Working Load (Max): 225kg

* Extension pack with outriggers required as per AS/NZS 1576

NB: All braces are to be mounted from the inside of the frame.

Make Sure It's Still An Oldfields

H. OLDFIELD & SON PTY. LTD.

THE CARE OF BRUSHES Matter of Great Importance

This article is compiled with the intention of providing brush users with instructive advice on the care of paint brushes.

The introduction of synthetic resin based paints and solvents has made the care of brushes a matter of great importance. If a good job is to be achieved at a reasonable cost.

The brush industry in England subscribes the Levens University to the extent of financing a year to enable that body to examine and analyze various brush making materials and to furnish a report on the result of these examinations.

The examination of this body has shown that a bristle is composed of a hard pliable core coated with a hard soft coat. The exterior of such bristles is covered with scales very similar to a fish.

It is this latter condition that provides a bristle brush with the ability to transfer liquid to a surface such as a ceiling and ability which is possessed to a much lesser degree by alternative or substitute materials.

The manufacturers purpose in suspending a brush in raw linseed oil for some time before using is to endeavour to obtain complete saturation of the core of the bristle with oil.

If complete penetration is obtained the possibility of damaging the brush by soaking in water after use is considerably reduced and furthermore the performance of the brush will be vastly improved.

If the brush is to be used in a paint of colour devoid of any oil content it will be necessary to remove all surplus oil from the bristle by running in

neutral turps or power kerosene or the appropriate spirit thinner.

After thoroughly shaking the brush to remove the solvent the brush is ready for use. The efficiency of the brush from the first drop of paint will depend upon the care it receives during its life. A carpenter never neglects his saw or chisel and the care of a brush is just as important.

A seasoned surface the demand today is for the quick drying paints and no doubt they make a big appeal because of this factor. However if the paint is allowed to accumulate in the throat of the brush and become hard the efficiency of the brush can be seriously affected.

During the oil based era paints which remained soft for some time in the brush whilst it was kept covered with water but modern paints harden fairly rapidly and once hard cannot be softened without a considerable amount of time and effort.

With some paints it is necessary to clean the brush in the paint thinner twice a day to keep the throat clean. The importance of this care is sharply illustrated when we mention that under hot dry conditions it has been found by the professional painter to be of tremendous advantage to use two brushes. One in use and one in the solvent, changing them over every two hours.

In any case the brush should be thoroughly cleaned at the end of each day.

Observance of the foregoing hints will more than make the slight expense and effort required in obtaining longer and more efficient brush life.
